

Atlas — Talent Specialist Interface UI/UX Designer Scope

Project: Atlas — Global Talent Marketplace **Audience:** Talent Specialists — Atlas's 11 internal staff members who source candidates, review interviews and profiles, manage assigned candidates post-approval, support clients, handle disputes, and maintain pool health for their assigned role categories **Operated by:** Staffva LLC, doing business as Atlas, registered in Michigan, USA

Core principles

Talent Specialists are Atlas's most important operators. They're the human layer that turns AI scoring into approved candidates, the trust signal that makes the platform work, and the relationship managers for both candidates and clients in their specialty.

Each Specialist owns one role category (e.g., Virtual Assistants, Bookkeepers, Developers) and works that category deeply.

The interface has to do a lot:

1. **Source candidates** — outbound recruiting, affiliate link management, daily activity tracking
2. **Review and approve candidates** — comprehensive review queue at Step 9 of the candidate pipeline
3. **Manage the candidate pool** — pool health monitoring, recruitment sprints when alerts fire
4. **Manage assigned candidates** — ongoing chat, feedback, support for live candidates
5. **Support clients** — handle shortlist requests, dispute resolution, market rate guidance, placement advice
6. **Handle disputes** — 72-hour SLA from both sides
7. **Track performance** — daily submissions, conversion rates, attribution analytics

The interface must support **all of these workflows without overwhelming the specialist.** Designed correctly, a Specialist should be able to spend 80% of their time on high-leverage work (interviews, candidate review, client support) and 20% on operational work (logging activity, sourcing, admin).

Global design requirements

- **Desktop-first.** Specialists work at desks. Mobile is supported for monitoring and lightweight actions but not primary.
 - **Information-dense but not overwhelming.** Use density wisely — show what matters, hide what doesn't.
 - **Action-oriented.** Every screen surfaces what the Specialist needs to do next.
 - **Real-time updates.** New candidates entering review queue, client requests, dispute alerts — all update without page refresh.
 - **Accessibility:** WCAG 2.1 AA minimum. Especially important — Specialists work all day, so contrast, focus management, and keyboard navigation matter.
 - **Performance:** all screens load in under 2 seconds; long lists paginate or virtualize; lazy load review videos and heavy assets.
 - **Primary language English** for the platform itself, but specialists may speak with candidates in multiple languages — the interface shouldn't force English-only assumptions.
-

Global navigation (post-login)

Top bar:

- Atlas logo (left, links to dashboard)
- Global search bar (searches candidates, clients, jobs, contracts, messages, disputes)
- Notifications bell (unread count, urgent items color-coded)
- Messages icon (unread count from candidates and clients)
- Avatar menu (right): My Profile, Account Settings, Performance, Help, Sign Out

Left sidebar (persistent on desktop):

- Dashboard
- Review Queue
- My Candidates
- My Clients
- Sourcing Pipeline
- Disputes
- Pool Health
- Reviews & Approvals
- Daily Activity
- Performance
- Help / Resources

The sidebar shows live counters for items that need attention:

- "Review Queue (3)"
- "Disputes (2)"
- "My Candidates (47)"
- etc.

Right side widgets (always visible on desktop):

- "On call" indicator if Specialist is currently in a video session
 - Quick action button: "Source candidate" (one-click create new candidate via affiliate link or manual)
-

Assigned role category & privacy

Every Specialist has a primary role category (set by admin). The Specialist's interface defaults to:

- Their assigned category for sourcing
- Candidates within their category for review
- Clients hiring in their category for support

But they can also see and work with candidates and clients outside their category if needed (e.g., covering for another Specialist on vacation, or taking on overflow). This is a small admin override toggle, but the default experience is category-focused.

Privacy boundaries for Specialists

Specialists can see:

- Full candidate profiles, including all interview footage, profile data, scores, references, and history
- Full client profiles within their category — real company names, contact info, hiring history (Specialists need this for shortlisting)
- Full client profiles for any client in a dispute they're handling
- Anonymized data outside their category

Specialists cannot:

- See or modify other Specialists' assigned candidates' confidential notes (private notes specialists keep on their own candidates)
- See admin-only platform settings, financial data, or user-suspension powers

- Access another Specialist's daily activity logs (Manager can; admin can; peer Specialists cannot)

Specialists are subject to a separate audit trail — every action they take on a candidate, client, or dispute is logged.

PART 1 — ENTRY & DASHBOARD

Step 1 — Talent Specialist Sign In

Purpose: Authenticated entry to the Specialist interface.

URL: `/specialist/signin`

Layout:

1. **Header**

- Atlas logo
- "Talent Specialist Sign In"

2. **Form**

- Email
- Password
- 2FA prompt (mandatory for all Specialist accounts — internal security requirement)
- "Remember me" checkbox

3. **Submit** → Specialist Dashboard

4. **Security**

- 2FA required by default (cannot be disabled)
- 5-failed-attempt logout
- Login history visible in account settings
- Forced password reset every 90 days (admin policy)

Designer deliverables:

- Sign-in page layout
- 2FA input screen with code generator hint
- Lockout state with cooldown

- Forgot password flow
-

Step 2 — Specialist Dashboard

Purpose: Daily home base. Surfaces what needs immediate attention across all Specialist responsibilities.

URL: `/specialist/dashboard`

Layout (top to bottom):

Header

- "Welcome back, [First Name]"
- Today's date
- Atlas system status indicator ("All systems normal" or "Issue detected — see notifications")

Top action panel (urgent items, prioritized)

This is the most important section — it surfaces the things demanding attention right now.

Each item shows up as a card with:

- Priority indicator (red / orange / yellow)
- Type (Review / Dispute / Client Request / Pool Alert)
- Specific item details
- Time elapsed / SLA remaining
- Action button

Examples:

- **Red (urgent):** "Dispute open: [Client Name] vs [Candidate Name] — 14h remaining on 72h SLA"
- **Red (urgent):** "Review queue 3 of 5 SLAs at risk — [first item]"
- **Orange (today):** "Shortlist incomplete for [Client Name]'s [Job Title] — only 1 candidate matched"
- **Yellow (this week):** "Pool depletion alert: [Role Category] has 12 active candidates (threshold 15)"

The panel sorts by urgency and time-sensitivity. Items are dismissible only after they've been resolved.

Today's snapshot panel

Compact data overview:

- **Review queue status:** [X] candidates waiting, average wait time
- **Active disputes:** [X] open, oldest waiting [time]
- **My candidates:** [Total live] / [Pending action] / [On call right now]
- **Active sourcing requests:** [X] from clients
- **Pool health for my category:** [Status — Strong / Stable / Depleted]
- **Today's daily submission status:** [Submitted ✓ / Not yet submitted]

My active items

Three columns side-by-side:

Column 1: Candidates needing my action

- List of candidates assigned to this Specialist requiring action (revisions, re-interview, profile update)
- Per item: candidate name, what's needed, when it became actionable
- Click → candidate profile

Column 2: Clients needing my action

- List of clients in this Specialist's category who have open requests (shortlist requests, dispute initiation, market rate questions)
- Per item: client name, request type, time elapsed
- Click → client request detail

Column 3: Recent activity feed

- Live feed of significant events: new candidate signups, client job posts, dispute resolutions, candidate hires
- Helps Specialist stay aware without actively monitoring
- Auto-updates

Performance snapshot

Compact metrics card:

- Reviews completed today / this week
- Disputes resolved today / this week
- Average review time
- Average dispute SLA hit rate
- Candidates approved this month
- Sourcing performance (candidates I've approved vs. inactive)

Quick actions panel (right side)

Floating action buttons:

- "Source candidate" → create new candidate via affiliate link or manual signup
- "View pool" → quick view of category pool health
- "Submit daily activity" → daily submission form
- "Message a candidate" → search and chat
- "Message a client" → search and chat

Designer deliverables:

- Dashboard layout (desktop, tablet, mobile)
 - Action panel with priority levels and SLA indicators
 - Today's snapshot data card
 - Three-column active items
 - Recent activity feed (real-time updates)
 - Performance snapshot
 - Quick actions floating panel
 - Empty state for new accounts
-

PART 2 — CANDIDATE REVIEW & APPROVAL

Step 3 — Review Queue page

Purpose: The Specialist's most-used screen. Shows all candidates in Step 9 of the vetting pipeline (Final Review) waiting for the Specialist to review and decide.

URL: </specialist/review-queue>

Critical detail: The Specialist reviews **everything in one comprehensive pass** — both AI Interviews, the full profile, intro video, voice intro, references, and work samples. This is not multiple smaller reviews; it's one review that approves, requests revisions, or rejects.

Layout:

Header

- "Review Queue"

- Filter tabs: My Queue (default — candidates assigned to me), All in My Category, Other Categories (admin override)
- Sort: Oldest first (default — preserves SLA), By candidate name, By submission date
- Search within queue

Queue list (left side)

Compact list of candidates awaiting review.

Per row:

- Candidate photo (small)
- Candidate name + role category
- Time since submission (color-coded: green if <24h, yellow 24-48h, red >48h)
- AI scores summary (English: C1 · Interview 1: 87 · Interview 2: 84) — quick-scan
- Anti-cheat flag indicator if any (red dot if footage was flagged for review)
- Country flag

Click a candidate → opens review interface in main pane.

Review interface (main pane, opens when candidate selected)

This is the largest and most complex screen. Designed as a single-page view with sections in tabs or stacked accordions.

Header:

- Candidate name
- Photo
- Role category
- Submission date / time elapsed
- Status (Pending Review)
- Action buttons: Approve / Request Revisions / Reject
- "Open candidate's full chat history" button (sidebar opens)

Section 1 — AI Interview 1 (general)

- Embedded video player with full timeline
- Anti-cheat flagged moments visible on the timeline (red dots)
- Click flagged moment → jumps to that timestamp + shows AI explanation
- AI score breakdown:
 - Communication: [score]
 - Problem-solving: [score]
 - Judgment: [score]
 - Behavioral examples: [score]

- Transcript (auto-generated, alongside video)
- Specialist private notes field (auto-saves)

Section 2 — AI Interview 2 (role-specific)

Same structure as Interview 1, with category-specific score breakdown:

- For VAs: organization, communication, judgment, tools fluency
- For Bookkeepers: accuracy, attention to detail, accounting concepts
- For Developers: technical accuracy, code quality, problem-solving
- (Per category)

Specialist private notes field

Section 3 — Profile review

Full candidate profile preview as it would appear publicly. Specialist can:

- Click sections to expand
- See the candidate's bio, rate, availability, skills, work history, portfolio, education
- Compare profile claims against interview footage (e.g., they said they have 5 years of experience — does that match their work history?)

Profile-specific notes field.

Section 4 — Intro video

- Embedded video player
- Identity check status: Match ✓ or Flagged
- Intro voice playback
- Voice fingerprint match status
- Specialist's notes on intro quality

Section 5 — References & employment verification

- List of submitted references with their status:
 - Pending (sent, awaiting reply)
 - Confirmed (employer responded, authenticated work)
 - Conflicting (employer responded but disputed claims)
 - Unreachable (couldn't verify)
- Per reference: company, role, dates, scope, contact info, response (if confirmed/conflicting)
- Specialist can manually contact references if needed

Section 6 — Work samples & portfolio

- Gallery of all uploaded samples

- Per sample: title, description, role, date, file/preview
- Click to view full

Section 7 — Anti-cheat & integrity

- Comprehensive integrity report:
 - Identity match across sessions: [pass/fail]
 - Voice fingerprint match across sessions: [pass/fail]
 - Anti-cheat flags by session: [details per session]
 - Behavioral anomalies: [details]
- Aggregate integrity score
- Specialist can mark "Resolved" or "Concerning" per flag
- Specialist's overall integrity assessment field

Section 8 — Specialist's overall assessment

- Strengths section (text area)
- Concerns section (text area)
- Recommendation: Approve / Request Revisions / Reject
- Decision rationale (required for any decision)
- Optional: Tags for the decision (e.g., "Strong communication," "Needs portfolio improvement," "Identity mismatch concern")

Decision flow

Approve:

- Confirmation: "Approve this candidate to go LIVE on Atlas?"
- Specialist confirms
- Candidate moves from Step 9 to Step 10 (LIVE)
- Profile becomes public
- Founding cohort badge applied (where applicable)
- Specialist becomes the candidate's assigned ongoing Talent Specialist
- References are auto-contacted in the background
- Notification sent to candidate
- Updated dashboard

Request Revisions:

- Specialist writes specific revision feedback (required, structured)
- Feedback is delivered to candidate via in-app + WhatsApp + email
- Candidate sees the feedback on their pre-approval dashboard
- Candidate can revise profile/intro and resubmit
- No cooldown — immediate resubmission allowed
- Candidate returns to Specialist's review queue

Reject:

- Specialist writes detailed rejection rationale (required)
- Specialist categorizes the rejection: profile quality issue, integrity concern, skills gap, other
- Candidate moved to "rejected" state in pipeline
- Notification sent to candidate
- Appeal information shown to candidate
- Specialist's rationale logged for admin review
- This is the most consequential action — designer should treat it with appropriate gravity

Side panel — full candidate context

When a candidate is selected, a side panel can be opened showing:

- Candidate's full message history with the Specialist
- Their pipeline history (every step, every score, every retake)
- Their original signup info
- Affiliate attribution (which Specialist or referral source)
- Past flagged events

Designer deliverables:

- Review queue list (left pane) with sort, filter, search
- Review interface main pane with all 8 sections
- Embedded video player with anti-cheat flag overlay
- Decision modals (approve, revisions, reject)
- Revision feedback structured form
- Side panel for candidate context
- SLA countdown indicators
- Empty state ("No candidates awaiting review")

Step 4 — Re-Certification Review

Purpose: Specialists also review re-certification attempts (when candidates retake tests/interviews to improve their scores). Lighter than full Step 9 review since the candidate is already approved.

URL: </specialist/re-cert-queue>

Layout:

Similar to Review Queue but scoped to re-cert attempts.

Per row:

- Candidate name + photo
- Component being re-tested (English / Interview 1 / Interview 2 per category)
- Submission date
- Previous top score for that component
- New attempt score (auto-generated by AI)
- Recommendation: "New top score" (replaces) or "No improvement" (preserves previous)

Specialist's role:

- Verify AI scoring of new attempt
- Confirm anti-cheat integrity of session
- Approve replacement of top score OR confirm no improvement
- Quick decision — most re-certs are formality after AI scoring

Designer deliverables:

- Re-cert queue list
 - Quick approval interface (lighter than full review)
 - Bulk approval option for clean re-certs
-

PART 3 — CANDIDATE MANAGEMENT (POST-APPROVAL)

Step 5 — My Candidates page

Purpose: Manage all candidates assigned to this Specialist. Specialist supports candidates throughout their entire time on Atlas.

URL: </specialist/my-candidates>

Layout:**Header**

- "My Candidates"
- Total count: [X] candidates assigned
- Filters:

- Status: All / Live / Pending Action / On Active Contract / On Vacation / Suspended
- Last activity: This week / This month / This quarter / Older
- Country / region
- Category (default: my category, can include any with admin override)
- Search by name

Candidate list

Per row:

- Candidate photo + name
- Role category
- Status badge (Live / Active Contract / Multiple Contracts / Vacation / Pending Action / At Capacity)
- Country flag
- Active contracts: [X]
- Active conversations with Specialist: [X]
- Last activity / interaction
- Pending action indicator if any
- Quick actions: Message, View Profile, See Full History

Candidate detail view (opens when row clicked)

Comprehensive single-screen view of one candidate:

Header:

- Photo + name
- Role category
- Status (Live)
- Quick stats: hired count, active contracts, total earnings on Atlas, average rating, "would hire again" %
- Action buttons: Message, View Profile, See Full History

Section 1 — Personal context for the Specialist

- Specialist's private notes on this candidate (auto-saving rich text area)
- Notes from past conversations
- Patterns observed (e.g., "Punctual with hours, occasional communication delays")
- Skills the Specialist has helped them develop
- Relationships with specific clients

Section 2 — Active contracts

- List of all active contracts
- Per contract: client (with display name visible to specialist for non-disputed cases), role, rate, hours per week, started date, current status
- Quick links to each contract

Section 3 — Pipeline / activity

- Timeline of major events: applied, vetted, approved, hired, contracts ended, reviews received, re-certifications attempted
- Filter by event type

Section 4 — Past clients

- All clients this candidate has worked with
- Per client: display name, role, contract dates, final review left
- Useful when Specialist is helping a candidate get more work

Section 5 — Past conversations with Specialist

- Searchable history of all messages between Specialist and this candidate

Section 6 — Performance metrics

- Profile Strength score over time (chart)
- Reviews aggregated
- Time tracker patterns (if hourly)
- Disputes (if any)

Action buttons:

- Message candidate
- Schedule a call with candidate
- Recommend a job opportunity (sends a curated job match)
- Request reference re-verification
- Suspend account (admin override required)
- Mark candidate as inactive

Designer deliverables:

- My Candidates list with all filters
- Candidate detail view with 6 sections
- Specialist private notes editor
- Action buttons and confirmations
- Empty state (no assigned candidates yet)
- Mobile responsive

Step 6 — Direct chat with candidate

Purpose: Specialist's primary communication channel with assigned candidates.

URL: `/specialist/messages?candidate=[id]` or accessed from My Candidates

Layout:

Same structure as the candidate-side Specialist chat (mirroring), but from the Specialist's perspective.

- Candidate list with active conversations on left
- Chat thread on right
- Composer at bottom
- Side panel with candidate context

Specialist-specific features:

- Internal notes (visible only to Specialist, not candidate)
- Tag / categorize the conversation (sourcing, support, dispute, training, vacation, etc.)
- Templates for common messages (welcome, dispute follow-up, profile improvement suggestion, etc.)
- Schedule a video call directly
- Record video calls (with both parties consent)

Designer deliverables:

- Specialist's chat view
- Internal notes (collapsible, separate from candidate-visible chat)
- Conversation tagging
- Message templates library
- Mobile responsive

PART 4 — CLIENT MANAGEMENT

Step 7 — My Clients page

Purpose: Manage all clients in this Specialist's role category.

URL: /specialist/my-clients

Layout:

Header

- "My Clients"
- Total count: [X] clients in my category
- Filters:
 - Status: All / Active hires / No active hires / In dispute / Suspended
 - Last activity: This week / This month / Older
 - Country / region
 - Trust tier (New / Trusted / Top Client)
 - Search by name

Client list

Per row:

- Client display name (or company name if Specialist has full visibility — varies)
- Country flag
- Number of hires made
- Number of active contracts
- Trust tier badge
- Last activity
- Open issues if any
- Quick actions: View Profile, Message, See Hiring History

Client detail view (opens when row clicked)

Specialist-side view of a specific client.

Note on client visibility: Specialists can see the full client profile when within their role category. This is necessary for shortlisting, dispute resolution, and support.

Header:

- Real company name (Specialists see this)
- Photo / logo
- Country
- Trust tier badge
- Verified status
- Action buttons: Message, View Hiring History, Generate Shortlist

Section 1 — Specialist's private notes on this client

Auto-saving rich text editor.

Notes might include:

- Communication preferences ("Prefers async over video calls")
- Hiring patterns ("Hires VAs in 6-month engagements typically")
- Past dispute history with the Specialist
- Successful matches the Specialist has placed with this client

Section 2 — Active engagements

- List of all active candidates working with this client
- Per row: candidate name, role, rate, hours/week, status
- Quick links to each contract

Section 3 — Past engagements

- History of past hires
- Per row: candidate, role, dates, final outcome
- Reviews left by both sides

Section 4 — Open jobs

- Jobs the client has posted but not yet filled
- Per job: title, role, posted date, status (shortlist ready, building, etc.)
- Specialist can help curate or troubleshoot

Section 5 — Hiring patterns

Visual analytics:

- Average engagement length
- Total spend over time
- Categories they hire for
- Repeat hire rate
- "Would hire again" rate from past candidates
- On-time payment rate

Section 6 — Dispute history

- Past disputes (resolved)
- Current disputes (open)
- Specialist's role in each

Section 7 — Communication history with Specialist

- All past conversations

- Searchable

Action buttons:

- Generate custom shortlist for this client
- Message client
- Schedule a call
- Open a dispute on their behalf (rare — usually clients open disputes)
- Mark client as VIP / require special handling

Designer deliverables:

- My Clients list with all filters
 - Client detail view with 7 sections
 - Specialist private notes editor for clients
 - Hiring patterns visualization
 - Action buttons
 - Empty state
 - Mobile responsive
-

Step 8 — Direct chat with clients

Purpose: Specialist's primary communication channel with clients in their category.

URL: `/specialist/messages?client=[id]`

Layout:

Mirrors the candidate-side Specialist chat. Same structure as Step 6 but with client list.

Specialist-specific features:

- Internal notes (Specialist-only, not visible to client)
- Conversation tagging (shortlist request, dispute, market rate question, hiring strategy, replacement request)
- Templates for common messages
- Quick links to client's profile, hiring history, active engagements

Designer deliverables:

- Specialist's chat with clients
- Internal notes
- Conversation tagging
- Message templates library

PART 5 — SOURCING & POOL HEALTH

Step 9 — Sourcing Pipeline page

Purpose: Outbound sourcing workflow. Specialists actively recruit candidates into their category, especially when pool depletion alerts fire.

URL: </specialist/sourcing>

Layout:

Header

- "Sourcing Pipeline"
- Pool health indicator for my category: [Strong / Stable / Depleted]
- Active sourcing requests count

Active Sourcing Requests panel (top)

Cards for each Tier 1 alert (specific job needs more candidates):

Per request:

- Client name (display name visible to Specialist)
- Job title
- Currently shortlisted: [X] / 5
- Time since job posted
- Specific gaps: "Need 4 more, requires QuickBooks + Excel + Spanish"
- Action: "Find candidates for this job"

Pool Health monitor (always visible)

Compact panel showing:

- My category total live candidates: [X]
- Threshold: 15
- Status: [color-coded — green/yellow/red]
- Trend (last 30 days)
- Click → Pool Health detail page

My affiliate link

- Display Specialist's unique affiliate link (URL)
- Copy button
- QR code generator (for in-person sourcing or printing)
- Stats: views from my link, signups from my link, approved from my link, hired from my link

Sourcing tools

Inbound applications I've referred:

- All candidates who signed up via Specialist's affiliate link
- Status: where they are in the pipeline
- Quick actions: nudge candidate, message candidate

Outbound activity tracker:

- Today's outreach: [X] LinkedIn messages sent, [X] emails sent, [X] direct outreach
- Conversion rate: outreach → signups → approved → hired
- Per channel: LinkedIn, FB groups, Reddit, direct referral, university partnerships

Sourcing strategies (templates):

- Pre-built outreach scripts for common candidate profiles
- Follow-up sequences
- Social media post templates
- Landing page links to share

Recruitment sprint mode (when pool depletion alert fires)

When pool drops below 15 candidates, this special mode appears:

- Header: "🔥 Pool Depletion — Sprint Mode Active"
- Compact dashboard showing:
 - Current pool: [X] (need 15)
 - Daily signup pace required
 - Sources working / not working
- One-click access to:
 - Outreach templates calibrated for the gap
 - Active LinkedIn campaign management
 - Daily activity tracking
 - Coordination with other Specialists in similar categories
- Goal-tracking ("4 candidates needed in next 7 days")

Designer deliverables:

- Sourcing Pipeline overview

- Active Sourcing Requests panel
 - Pool health monitor
 - Affiliate link display with QR code generator
 - Inbound applications tracker
 - Outbound activity tracker
 - Sourcing strategies / templates library
 - Recruitment sprint mode (special urgent state)
-

Step 10 — Pool Health page

Purpose: Detailed view of category pool health and trends.

URL: `/specialist/pool-health`

Layout:

Header

- "Pool Health for [My Category]"
- Status indicator (Strong / Stable / Depleted)
- Last updated timestamp

Live status

Per metric:

- **Active Candidates:** [X] (threshold 15)
- **Pending Vetting:** [X]
- **Vetting Pass Rate:** [%]
- **Average Vetting Time:** [days]
- **New Applications This Week:** [X]
- **Approved This Week:** [X]
- **Going Live This Week:** [X]

Trend chart

Line graph showing pool size over time (last 90 days).

Match success metrics

For jobs posted in my category:

- Auto-shortlist completion rate (jobs with full 5-candidate shortlist)
- Average match score (when shortlists are auto-generated)
- Time from job post to first match (when full shortlist is delivered)
- Specialist sourcing intervention rate (jobs requiring Specialist outbound)

Tier 2 alert detail (if active)

If pool depletion alert is active:

- Why this alert fired (criteria triggered)
- Recommended actions
- Expected timeline to resolve
- Other categories' status (sometimes depletion is correlated)

Sourcing performance vs. pool health

- Specialist's sourcing volume: [X] candidates sourced this month
- Specialist's sourced candidates pass rate: [%]
- Specialist's sourced candidates hire rate: [%]
- Comparison vs. category baseline

Designer deliverables:

- Pool health detail layout
 - Trend chart
 - Match success metrics
 - Tier 2 alert detail panel
 - Sourcing performance comparison
 - Mobile responsive (lightweight version)
-

PART 6 — DISPUTE RESOLUTION

Step 11 — Disputes page

Purpose: Manage all disputes opened on contracts the Specialist is responsible for.

URL: </specialist/disputes>

Layout:

Header

- "Disputes"
- Total count: [X] open disputes
- Filter: All / Open / In Progress / Resolved / Escalated to Admin
- Sort: Oldest first (default — preserves SLA), most recent, by client/candidate name

Dispute list

Per row:

- Status badge (Open / In Progress / Resolved / Escalated)
- Client display name
- Candidate name
- Contract reference
- Dispute reason (category)
- Submission date / time elapsed
- SLA countdown (red if approaching breach)
- Quick actions: Open, Message both parties, Escalate

Dispute detail view (opens when clicked)

Header:

- Status, client, candidate, contract, dates
- Action buttons: Open communication, Make decision, Escalate to admin

Section 1 — Dispute submission

- Initiator (client or candidate)
- Submission date
- Reason category (Quality of work / Hours billed / No-show / Communication / Payment / Other)
- Description from initiator
- Evidence files (screenshots, documents, etc.)

Section 2 — Other party's response

- Response from the other party
- Their evidence

Section 3 — Specialist's investigation

Editable workspace for the Specialist:

- Notes on the dispute
- Evidence the Specialist has gathered
- Conversation history with both parties

- Time tracker review (if relevant)
- Screenshots and patterns from past contracts

Section 4 — Decision

Decision options:

- Side with client
- Side with candidate
- Partial split (with custom outcome)
- Refund / partial refund
- Replace candidate (with new candidate match)
- No action / dismiss
- Escalate to admin (if Specialist needs higher authority)

Required: Decision rationale (free text + structured tags)

Section 5 — Communication with both parties

- Specialist messages both client and candidate
- Final decision communicated to both

Section 6 — Decision log

Once resolved:

- Decision details
- Actions taken (refund, replacement, etc.)
- Both parties' acknowledgment
- Followup expectations

SLA management

- Each dispute has a 72-hour SLA
- Visual countdown
- Escalation path (escalate to admin if Specialist can't resolve)
- Dispute history tracked per Specialist (admin reviews dispute outcomes for performance)

Escalation to admin

- "Escalate to admin" button on dispute detail
- Specialist explains why escalation is needed
- Admin notified, takes over
- Original Specialist can stay informed but admin makes final decision

Designer deliverables:

- Disputes list with filters and SLA indicators
 - Dispute detail view with 6 sections
 - Investigation workspace
 - Decision interface with all options
 - SLA countdown component
 - Escalation flow
 - Resolution flow
-

PART 7 — DAILY ACTIVITY & PERFORMANCE

Step 12 — Daily Activity page

Purpose: Track and submit daily sourcing, outreach, and recruiting activity. Required by Manager.

URL: </specialist/daily-activity>

Layout:

Header

- "Daily Activity for [Date]"
- Submitted status: [Submitted ✓ / Not yet submitted]
- Submit by [end of day]

Activity submission form

Section 1 — Outreach tracking

For each platform/channel, log today's activity:

- LinkedIn: [number of messages sent]
- LinkedIn: [number of posts/comments]
- Email outreach: [number of emails]
- Reddit / forums: [number of posts/comments]
- FB groups: [number of posts/comments]
- Direct referrals: [number]
- Other: [text field for explanation]

Optional: links/screenshots as proof

Section 2 — Conversations / Outreach Results

- Total responses received today: [number]
- Total signups generated today: [number]
- Quality of conversations (subjective rating)

Section 3 — Profile work

- Reviews completed today: [auto-calculated]
- Disputes resolved today: [auto-calculated]
- Re-certs reviewed: [auto-calculated]
- Profile updates approved/rejected: [auto-calculated]

Section 4 — Notes

Free text:

- Today's wins
- Today's blockers
- Tomorrow's priorities

Submit button

Submission is logged with timestamp and locked. No editing after submission (or only with admin override).

Past submissions

- Calendar view of past submissions
- Click any past day to see what was logged

Designer deliverables:

- Daily Activity submission form
- Auto-calculation indicators
- Notes editor
- Calendar view of past submissions
- Submission lock state

Step 13 — Performance page

Purpose: Specialist sees their own performance metrics, trends, and benchmarks vs. peers.

URL: `/specialist/performance`

Layout:

Header

- "Your Performance"
- Time range selector: Today / This Week / This Month / This Quarter / Custom

Key performance metrics

Three-column dashboard:

Reviews & Approvals:

- Reviews completed
- Average review time
- Approval rate
- Rejection rate
- Rejection categorization (skills / integrity / profile / other)
- SLA breach rate

Disputes:

- Disputes handled
- Average resolution time
- SLA hit rate
- Outcomes (sided with client / candidate / partial / dismissed)
- Escalation rate

Sourcing:

- Candidates sourced
- Pass rate (sourced candidates → approved)
- Hire rate (sourced candidates → hired)
- Daily activity completion rate

Trends

Line/bar charts showing:

- Reviews completed over time
- Approval rate trend
- Sourcing volume over time

- Pool health under your watch

Comparative benchmarks

- Your performance vs. category average
- Your performance vs. all-Specialist average
- Note: comparisons are anonymous (you don't see other Specialists' specific numbers, just averages)

Goals (if set by manager)

- Active goals from Manager
- Progress toward each
- Notes from Manager

My ranking (if applicable)

Some metrics may be ranked across all Specialists (e.g., review SLA hit rate). Specialists can see where they rank.

Designer deliverables:

- Performance overview with date range selector
 - Three-column metrics
 - Trend charts
 - Comparative benchmarks
 - Goals tracking
 - Ranking visualization (where applicable)
-

PART 8 — REVIEWS & APPROVALS

Step 14 — Reviews & Approvals page

Purpose: Specialist's review of past actions — see all candidates approved/rejected, all disputes handled, all decisions made.

URL: </specialist/reviews-approvals>

Layout:

Tabs

- Approvals (candidates approved by me)
- Rejections (candidates rejected by me)
- Revisions Requested
- Disputes Resolved

List view

Per item:

- Item type (approval / rejection / revision / dispute)
- Date
- Candidate or Client name
- My decision
- Brief reasoning
- Outcome (e.g., did approved candidate get hired? did rejected candidate appeal?)

Detail view

Click any item to see full context:

- Decision made
- My rationale
- Evidence used
- Outcome (linked to live engagement)
- Reflection space — Specialist can add lessons learned

Filters

- Date range
- Decision type
- Outcome
- Search

Designer deliverables:

- Reviews & Approvals overview
- Filter and sort
- Detail view
- Reflection space

PART 9 — ACCOUNT & SETTINGS

Step 15 — Account Settings

Purpose: Specialist's account-level settings.

URL: </specialist/settings>

Sections:

Profile (used for candidate-facing display)

- Photo
- Display name (first name + last initial — visible to candidates)
- Bio (visible to candidates)
- Languages spoken
- Specialties / role category
- Availability hours

Login & security

- Email
- Password
- 2FA management (mandatory)
- Active sessions
- Login history

Notifications

- Per-channel toggles
- Per-event toggles:
 - New candidate in review queue
 - Dispute opened on a contract I oversee
 - Pool depletion alert for my category
 - Daily submission reminder
 - Manager messages
 - System alerts

Working hours

- Working timezone
- Available hours for video calls with candidates and clients
- Out-of-office mode (with cover Specialist)

Display preferences

- Theme
- Density (compact / comfortable)
- Auto-refresh frequency

Help & resources

- Specialist handbook
- Internal documentation
- Contact admin

Designer deliverables:

- Settings sections
 - Forms with all controls
 - Mobile responsive
-

Step 16 — Help & Resources

Purpose: Internal documentation, training, and resources for Specialists.

URL: </specialist/help>

Layout:

Navigation

- Onboarding (for new Specialists)
- Workflows (review process, dispute process, sourcing playbooks)
- Templates (message templates, outreach scripts)
- Policies (Atlas internal policies for Specialists)
- Training videos (if applicable)
- Quick reference cards

Search

Search across all internal documentation.

Designer deliverables:

- Internal help center
- Documentation viewer
- Templates library
- Search

CROSS-CUTTING ELEMENTS

Notification center

Same pattern as candidate/client side, but with Specialist-specific events:

- New candidate in review queue
- Dispute opened
- Pool depletion alert
- Manager messages
- Daily submission reminder
- Re-cert review needed
- System alerts

Global search

Searches across:

- Candidates (assigned and platform-wide within scope)
- Clients (assigned)
- Disputes
- Messages
- Past decisions
- Internal documentation

Real-time updates

Many Specialist screens benefit from real-time:

- Review queue (new candidates appearing)
- Disputes (new disputes appearing)
- Pool health (live tracking)
- Notifications

Empty states

Key empty states:

- "No candidates in review queue" — encouraging copy

- "No active disputes — your category is healthy"
- "No new applications today — try outbound sourcing"

Onboarding tour

For new Specialists hired into the team — guided tour of the interface on first login.

Mobile considerations

Specialists primarily work at desks but mobile support is needed for:

- Monitoring notifications
- Quick check on dispute status
- Reading a candidate profile briefly
- Submitting daily activity (lightweight version)

Full review interface, complex sourcing tools, and dispute resolution workspace are desktop-first only.

DELIVERABLES SUMMARY

Pages (16 main pages)

1. Sign In
2. Dashboard (urgent items + active items + performance)
3. Review Queue
4. Re-Cert Queue
5. My Candidates (list + detail)
6. Direct chat with candidates
7. My Clients (list + detail)
8. Direct chat with clients
9. Sourcing Pipeline
10. Pool Health
11. Disputes (list + detail)
12. Daily Activity
13. Performance
14. Reviews & Approvals (decision history)
15. Account Settings
16. Help & Resources

Components needed

Specialist-specific:

- Action panel with priority levels (urgent items)
- Today's snapshot card
- Three-column active items
- Real-time activity feed
- SLA countdown components
- Anti-cheat flag indicator on video timeline
- Embedded video player with anti-cheat overlay
- Decision modals (approve/revisions/reject)
- Specialist private notes editor (per candidate, per client)
- Affiliate link display with QR code
- Pool health indicator (small + large versions)
- Recruitment sprint mode UI
- Tier 1 / Tier 2 alert components
- Daily activity submission form
- Dispute investigation workspace
- Performance metric cards and charts
- Comparative benchmarks visualization

Reused from candidate/client side:

- Forms, inputs, buttons, modals
- Filter components
- Search bar
- Avatar, badges, status indicators
- Toast notifications
- Empty states

Design tokens

- Same as candidate side (consistency)
- Plus Specialist-specific: priority colors (red/orange/yellow), SLA countdown styling, anti-cheat flag styling

Accessibility

- WCAG 2.1 AA across all pages
- Specialists work all day — high contrast, generous spacing, clean typography
- Full keyboard navigation
- Screen reader support

Performance

- All screens under 2 seconds
- Real-time updates via WebSocket
- Long lists virtualized (review queue, dispute list, candidate list, client list)
- Lazy loading on review videos and heavy assets

Final deliverables

- Figma file with all 16 pages + cross-cutting elements in desktop and mobile
- Complete component library
- Interaction prototypes for key flows: review queue → review interface → decision; dispute investigation → resolution; sourcing → daily activity submission
- Design tokens
- Accessibility annotations
- Real-time update specifications
- Loom walkthrough explaining major design decisions

That's the complete Talent Specialist Interface scope.
