

Atlas — Admin Interface UI/UX Designer Scope

Project: Atlas — Global Talent Marketplace **Audience:** Atlas internal admin staff (founders, operations leads, trust & safety, compliance, finance team) — the highest-privilege users on the platform with full visibility and control **Operated by:** Staffva LLC, doing business as Atlas, registered in Michigan, USA

Core principles

The Admin Interface is **the most powerful and most sensitive surface on Atlas**. It controls everything: users, finances, platform settings, legal compliance, audit trails, fraud detection, and the entire operational backbone.

Designed correctly, it lets admins:

1. **See everything** that happens on the platform with full context
2. **Intervene anywhere** — suspend users, override decisions, refund payments, escalate disputes
3. **Audit everyone** — including the Manager of Talent Specialists, every Talent Specialist, every action they've taken
4. **Configure the platform** — fees, thresholds, role categories, vetting rules, payment methods, integrations
5. **Investigate problems** — fraud, abuse, disputes, unusual patterns, security incidents
6. **Comply with law** — handle legal requests, data subject rights, breach response, regulatory inquiries
7. **Run the business** — financial reporting, performance analytics, growth metrics

Critical design tension: **power vs. safety**. Admins can do a lot of damage with a misclick. The interface must:

- Make destructive actions deliberate (confirmation flows, two-step approvals, audit-everything)
- Surface critical alerts prominently
- Distinguish read-only from action-taking views
- Log every admin action for accountability
- Never let an admin "lose" a user or a payment by accident

The interface should feel like a **mission control center** — information-dense, action-oriented, but never chaotic.

Global design requirements

- **Desktop-first.** Admins work at desks with multiple monitors. Mobile is supported for emergency monitoring only.
- **Information-dense.** Use tables, lists, and dashboards efficiently. This is not a consumer app — it's a professional tool.
- **Clear visual hierarchy.** Critical alerts and actions should jump out; routine data should recede.
- **Audit-first design.** Every action shows who did it, when, and what changed. Audit trails are visible everywhere.
- **Confirmation flows on destructive actions.** No "are you sure?" theater — real, deliberate confirmation with consequences spelled out.
- **Real-time updates.** New alerts, payment events, and security incidents appear without refresh.
- **Accessibility:** WCAG 2.1 AA minimum. Admins work all day — visual fatigue management matters.
- **Performance:** all pages load in under 2 seconds; long tables virtualize; heavy reports lazy-load.
- **Primary language English** for the interface.

Admin role hierarchy

Atlas may have multiple admins. Suggest these roles (designer scopes the structure; Admin themselves configures the actual permissions):

Role	Description
Super Admin	Full unrestricted access. Founder/CEO level. Can do everything including modify platform settings and create other admins.
Operations Admin	Day-to-day operations. Full user management, dispute escalation, performance oversight. Cannot modify platform settings or create admins.
Trust & Safety Admin	Specialized in fraud, abuse, security incidents. Full investigation powers but limited platform configuration.
Compliance Admin	Legal, data subject rights, regulatory. Read-only access to most areas with full powers in compliance domain.
Finance Admin	Payment processing, fee configuration, refunds, financial reporting. Full powers in finance domain.
Read-Only Admin	Auditor or stakeholder. Can see everything but cannot take action. Useful for investors, board members, or temporary auditors.

Each role has different permission scopes. The interface should:

- Show only what the active admin can see
- Disable actions the active admin cannot take
- Make the admin's role visible in the header
- Allow super admins to assume other admin roles temporarily for testing/auditing

Global navigation (post-login)

Top bar:

- Atlas logo (left, links to admin dashboard)
- Current admin role indicator (e.g., "Super Admin" or "Operations Admin")
- Global admin search (searches across users, transactions, disputes, audit logs, content)
- Notifications bell (admin-specific alerts only — see Step 4 below)
- Help / documentation link
- Avatar menu (right): My Profile, My Permissions, Account Settings, Help, Sign Out

Left sidebar (persistent on desktop):

- **Dashboard** (admin overview)
- **Users**

- Candidates
- Clients
- Talent Specialists
- Manager of Talent Specialists
- Other Admins
- **Operations**
 - Active Engagements
 - Job Postings
 - Disputes
 - Reviews
 - Reports & Analytics
- **Trust & Safety**
 - Fraud & Abuse
 - Security Incidents
 - Suspicious Activity
 - Account Suspensions & Bans
- **Finance**
 - Transactions
 - Fees & Pricing
 - Refunds & Adjustments
 - Subscriptions
 - Tax Documents
- **Compliance**
 - Legal Requests
 - Data Subject Rights
 - Audit Logs
 - Privacy Reports
 - Regulatory Submissions
- **Platform**
 - Settings
 - Configuration
 - Categories & Skills
 - Integrations
 - Email & SMS Templates
 - Help Center Content
- **Internal**
 - Performance Dashboards
 - Incident Reports
 - Internal Communications
 - Knowledge Base

The sidebar shows live counters for items needing attention:

- "Disputes (47, 12 SLA at risk)"
- "Suspicious Activity (3 today)"
- "Pending Refunds (8)"
- "Legal Requests (1 deadline approaching)"

PART 1 — DASHBOARD & ENTRY

Step 1 — Admin Sign In

Purpose: Authenticated entry to the Admin interface. Highest security on the platform.

URL: </admin/signin>

Design requirements

- **Mandatory 2FA** for all admin accounts (no exceptions)
- **IP allowlist** option for admin accounts (admins can only sign in from approved IPs — set in account settings)
- **Failed login lockout** at 3 attempts (much stricter than other interfaces)
- **CAPTCHA** required on every login
- **Login history** visible immediately upon login
- **Anomaly detection** — admin gets notified if a login from an unusual location or device occurs
- **Session timeout** at 1 hour of inactivity (with warning at 55 min)
- **Forced logout** if admin role permissions change
- **Forced password reset** every 90 days

Layout

1. **Header**
 - Atlas logo
 - "Admin Sign In"
2. **Form**
 - Email (required, must be on admin allowlist)
 - Password (with show/hide toggle)
 - 2FA code from authenticator app (mandatory after password)
 - "Sign in" button
3. **Security indicator**
 - "This is a restricted interface. Unauthorized access is logged and reported."
4. **After successful sign-in**
 - Brief security status check appears: "Signing in from: IP, Device, Location"
 - "Confirm" button — admin acknowledges the session

Designer deliverables

- Sign-in page (similar to Talent Specialist sign-in but with stricter visual treatment)
- 2FA input screen
- IP allowlist warning (if admin IP isn't allowlisted)
- Anomaly login notification
- Session timeout warning modal
- All security flow states

Step 2 — Admin Dashboard

Purpose: The mission control center. Everything urgent surfaces here.

URL: </admin/dashboard>

Layout

Header

- "Atlas Admin" with the admin's name
- Current admin role indicator
- Today's date and time
- Atlas system status indicator (green / yellow / red)

Critical alerts panel (top, prominent)

Items requiring immediate admin attention:

- **Red (urgent, security/legal):**
 - "Security incident: unusual login activity on [N] accounts"
 - "Legal request received with deadline [X]"
 - "Critical fraud alert: [N] accounts flagged today"

- "Payment processor error: \$[N] in transactions stuck"
- **Orange (today, operational):**
 - "[N] disputes have exceeded 72-hour SLA"
 - "[N] candidate appeals pending review"
 - "[N] data subject requests pending"
 - "[N] refunds awaiting approval"
- **Yellow (this week):**
 - "Pool depletion across [N] role categories"
 - "Performance review overdue for [N] specialists"
 - "Subscription renewals approaching"

Each alert:

- Priority indicator
- Specific details
- Time elapsed / SLA remaining (where applicable)
- Quick action button

Platform health panel

- Total users on platform (broken down: candidates, clients, specialists)
- Active engagements (live contracts)
- Today's transactions (count and value)
- Today's new candidates / clients
- Average SLA hit rates across the platform
- System uptime and error rates

Financial snapshot

- Today's GMV (gross merchandise value)
- This month's GMV
- Year-to-date revenue
- Pending payouts
- Recent refunds
- Outstanding chargebacks

Operations snapshot

- Disputes: open / in progress / resolved today
- Reviews completed today (across team)
- Average review SLA hit rate
- Pool health overview (across all categories)

Recent admin activity feed

- Live feed of admin actions taken today (with admin name, action, user affected, timestamp)
- Helps multiple admins coordinate
- Filterable by admin or action type

Quick actions panel (right side, floating)

- "Investigate user" → search and open user record
- "Issue refund" → refund initiation flow
- "Suspend account" → suspension flow
- "Export report" → custom report builder
- "Send announcement" → platform-wide message to users
- "Open ticket" → internal ticket for tracking

Designer deliverables

- Admin dashboard layout (desktop, tablet)
- Critical alerts panel with priority levels

- Platform health panel
- Financial snapshot
- Operations snapshot
- Admin activity feed (real-time)
- Quick actions floating panel
- Empty state ("No urgent items")

Step 3 — Admin profile & permissions page

Purpose: The admin's view of their own role, permissions, and recent activity.

URL: `/admin/profile`

Layout

Header

- Admin photo + name
- Current role
- Email
- Phone
- 2FA status

Permissions matrix

A visual matrix showing what this admin can/cannot do across all admin domains:

Action	Status
View all users	✓
Suspend accounts	✓
Modify platform settings	✗ (Super Admin only)
Issue refunds	✓
Access financial data	✓
Modify fees	✗ (Super Admin only)
Handle legal requests	✓
Modify audit logs	✗ (immutable)
Create other admins	✗
Read incident reports	✓

My recent activity

- Timeline of every action this admin has taken
- Filterable by action type, date, affected user
- Each entry: timestamp, action, target, outcome, audit trail link

Account settings

- Email, password, 2FA, IP allowlist
- Notification preferences
- Session settings

Designer deliverables

- Admin profile page
- Permissions matrix component
- Activity timeline
- Account settings forms

PART 2 — USER MANAGEMENT

Step 4 — Users overview page

Purpose: The starting point for all user management.

URL: `/admin/users`

Layout

Header

- "All Users on Atlas"
- Filter tabs: Candidates / Clients / Talent Specialists / Manager / Admins
- Quick stats: total counts and trends
- "Search users" prominent at top

Per-tab content

When "Candidates" tab is active:

- Total candidates on platform
- Currently live (active profiles)
- In pre-approval pipeline
- Suspended / banned
- Filter by: country, role category, status, joined date, last activity, hire history
- Sortable columns: name, email, country, status, joined, hire count, total earnings
- Click row → opens individual candidate detail page

When "Clients" tab is active:

- Total clients on platform
- Verified / unverified
- Active hires / hiring history
- Suspended / banned
- Same filtering and sorting capabilities

When "Talent Specialists" tab is active:

- All 11 specialists
- Performance summary per specialist
- Daily activity status
- Caseload size
- Click row → opens specialist detail page (mirrors Manager's specialist view, but with admin's full audit access)

When "Manager" tab is active:

- The Manager of Talent Specialists
- Their performance metrics
- Their managerial activities (audited separately by admin)

When "Admins" tab is active:

- All admin accounts
- Their roles, permissions, last activity
- Create new admin (Super Admin only)
- Modify role / permissions

Bulk actions

- Export users to CSV
- Send bulk email/notification
- Bulk tag / categorize
- Bulk suspend (with confirmation)

Designer deliverables

- Users overview page with tabs
- Per-tab content variations
- Filter and sort components
- Bulk action toolbar
- Empty states
- Mobile responsive (basic mobile view, primarily desktop)

Step 5 — Individual Candidate detail page

Purpose: Full visibility into a single candidate's record.

URL: `/admin/users/candidates/[id]`

Layout

Header

- Candidate photo + name
- Country / time zone / languages
- Status badge (Live / In Pipeline / Suspended / Banned)
- Founding cohort badge (if applicable)
- Action buttons: Message, Suspend, Unsuspend, Delete account, Investigate, Export data

Section 1 — Identity verification

- ID type and country
- Name on ID (verified)
- Liveness check status (✓ matched, or flagged with details)
- Biometric match score
- Identity verification date and method
- Photo of front of ID (zoomable)
- Photo of back of ID (zoomable)
- Liveness video (playable)
- Anti-fraud signals (if any)
- Action: "Re-verify identity" / "Override verification" / "Flag identity"

Section 2 — Vetting pipeline status

Visual timeline of every step:

- Email verified ✓ (date)
- WhatsApp verified ✓ (date)
- Identity verified ✓ (date)
- Proctored English Assessment passed ✓ (date, score, attempts)
- Interview 1 passed ✓ (date, score, attempts)
- Talent Specialist assigned ✓ (date, specialist name)
- Interview 2 passed ✓ (date, score, attempts, category)
- Profile + Intro recorded ✓ (date)
- Final review ✓ (date, decision, specialist name, decision rationale)
- Live on Atlas ✓ (date)

For each step:

- Click to expand → see all attempts, scores, AI signals, specialist notes
- Recordings of interviews (admin can play full footage)
- Anti-cheat flags and resolutions

Section 3 — Profile snapshot

- Photo, bio, role title, tagline, country, city
- Rate, hours/week, availability
- Skills, tools, languages
- Work history with verification statuses
- Portfolio
- Education and certifications
- Public reviews

Section 4 — Engagement history

All contracts:

- Active contracts (with client display name; admin sees real client name)
- Past contracts
- Per contract: client, role, rate, hours, dates, total paid, final review

Admin can:

- Navigate to specific contract detail
- See dispute history per contract

Section 5 — Financial activity

- Total earnings on Atlas
- Recent payouts
- Payment method on file
- Tax documents (W-8BEN, 1099, etc.)
- Refunds related to this candidate

Section 6 — Communications

- All messages sent and received
- Filterable by recipient, date, contract
- Specialist conversation history

Section 7 — Audit log

Complete admin and system action history on this candidate:

- Identity verification events
- Test/interview events
- Profile changes
- Contract signings
- Disputes
- Reviews
- Admin actions on this account (suspensions, refunds, manual overrides)

Each entry: timestamp, action, who/what triggered it, before/after data, IP/device.

Section 8 — Trust & safety signals

- Anti-cheat flags (resolved/unresolved)
- Suspicious activity reports
- Reports filed against this candidate

- Reports filed by this candidate
- Pattern flags (e.g., "Multiple accounts detected")

Section 9 — Data privacy & legal

- Data subject access requests filed
- Data export logs
- Account deletion requests
- Right-to-be-forgotten status
- Active legal holds (if any)

Action buttons

- **Suspend account** — with reason field, duration (temp/permanent), notification to candidate
- **Unsuspend account** — restores access
- **Ban account** — permanent removal with reason
- **Delete account** — full deletion (GDPR right to be forgotten)
- **Override verification** — manually mark as verified (rare, with audit reason)
- **Refund** — initiate refund flow for any past transaction
- **Force log out** — forces all active sessions to terminate
- **Investigate** — flag for trust & safety follow-up
- **Add internal note** — admin's private note on this user
- **Export data** — full data export per GDPR/CCPA

Designer deliverables

- Individual candidate detail page layout
- All 9 sections with appropriate detail
- Action buttons with confirmation flows
- Recording playback components
- Audit log display
- Trust & safety signals visualization
- Mobile responsive (limited)

Step 6 — Individual Client detail page

Purpose: Full visibility into a single client's record.

URL: `/admin/users/clients/[id]`

Layout

Same structure as candidate detail page, with client-specific sections:

Section 1 — Identity verification

- ID type and country
- Liveness check status
- Biometric match
- Verification date

Section 2 — Onboarding status

- Email verified ✓
- ID verified ✓
- Payment method on file ✓
- Verified Client status ✓

Section 3 — Profile snapshot

Public client profile (with admin seeing the full real company name, not redacted)

Section 4 — Hiring history

- All hires made on Atlas
- Currently active engagements
- Past engagements
- Per hire: candidate, role, rate, dates, outcome
- Trust tier badges (New / Trusted / Top Client)

Section 5 — Financial activity

- Total spend on Atlas
- Active payment methods
- Recent transactions
- Pending charges
- Failed payments
- Refunds issued
- Subscription history (if applicable)

Section 6 — Communications

- Messages sent and received
- Specialist communications
- Disputes initiated/responded to

Section 7 — Trust & safety signals

- Reports filed against this client
- Reports filed by this client
- Pattern flags
- Confidential client status (if applicable)

Section 8 — Audit log

Complete history of admin and system actions on this client.

Action buttons

- Same as candidate (suspend, unsuspend, ban, delete, investigate, refund, force logout, export data)

Designer deliverables

- Individual client detail page
- All sections
- Action buttons with confirmation flows
- Mobile responsive

Step 7 — Individual Talent Specialist detail page

Purpose: Admin's full audit view of a Specialist.

URL: `/admin/users/specialists/[id]`

Layout

Mirrors the Manager's individual Specialist oversight page from the Manager scope, with additional admin-only data:

- All sections from Manager view (performance, workload, daily activity audit, notes, communication, etc.)

Plus Admin-only sections

- **Account creation date and method**
- **Termination history** (if reactivated, when, by whom)
- **Salary / contract terms** (if Atlas tracks this internally)
- **Performance review history** with admin and Manager comments
- **Disciplinary record** (if any)
- **Compliance training status** (e.g., privacy training, security training completion)
- **Access to admin tools** (if Specialist has any elevated permissions)

Action buttons

- **Suspend** — temporary or permanent
- **Restrict permissions** — revoke specific access
- **Force log out**
- **Performance review** — initiate formal review
- **Coaching note** — log for HR records
- **Terminate** — with full HR audit trail (Super Admin only)

Designer deliverables

- Talent Specialist admin detail page
- All Manager-view sections
- Admin-only HR sections
- Disciplinary action flows with full audit
- Mobile responsive (limited)

Step 8 — Individual Manager detail page

Purpose: Admin's audit of the Manager of Talent Specialists.

URL: </admin/users/manager>

Layout

Same structure as Specialist detail page, with manager-specific metrics:

- Manager's personal Specialist performance (their own work)
- Managerial performance (audit ratings, team coaching, performance reviews delivered)
- Reports submitted to Admin
- Strategic decisions made
- Cross-team coordination effectiveness

The Manager's actions are audited separately to ensure fairness in oversight of their team.

Designer deliverables

- Manager admin detail page
- Both personal and managerial metrics
- Mobile responsive (limited)

Step 9 — Other Admins page

Purpose: Admin management of other admin accounts.

URL: </admin/users/admins>

Layout

- List of all admin accounts
- Per row: photo, name, role, last activity, IP allowlist status
- Filter: by role
- Sort: alphabetical, last activity

Per admin detail

- Profile information
- Role (assigned by Super Admin)
- Permissions matrix
- IP allowlist
- Last login (with location/device)
- Recent activity log

Action buttons

- **Modify role** — Super Admin only, change another admin's role
- **Modify permissions** — granular permission control
- **Force log out**
- **Suspend** — temporarily disable
- **Terminate** — remove admin status (Super Admin only)
- **Reset 2FA** — admin needs to re-enroll in 2FA

Create new admin

Form (Super Admin only):

- Email
- Name
- Role
- IP allowlist (optional)
- Send invitation
- New admin receives email to set password and enroll 2FA

Designer deliverables

- Admins management page
- Individual admin detail
- Modify role/permissions flow
- Create new admin flow
- Mobile responsive (admin can be managed on mobile in emergencies)

PART 3 — OPERATIONS

Step 10 — Active Engagements page

Purpose: Monitor all live contracts on the platform.

URL: </admin/operations/active-engagements>

Layout

Header

- "Active Engagements"
- Filter: by category, country, length, value
- Search by client/candidate name

Engagements list

Per row:

- Client display name (admin sees real)
- Candidate name
- Role
- Started date
- Current rate
- Hours per week
- Total paid to date
- Status badge (Active / Paused / In dispute)
- Owning Talent Specialist
- Quick actions: View detail, Message both parties, Audit

Engagement detail view

When admin opens a specific engagement:

- Full contract view
- All terms, amendments, signatures
- Time tracker history (full screenshots and logs)
- Payment history
- Communication history between client and candidate
- Active disputes
- Both parties' profiles (linked)

Admin actions

- Override contract terms (rare, with full audit)
- Force a payment release
- Mediate / intervene in dispute
- Pause contract administratively
- Cancel contract administratively (with refund/no-refund decision)

Designer deliverables

- Active engagements list
- Engagement detail view
- Admin override flows with audit trails
- Mobile responsive

Step 11 — Job Postings page

Purpose: Monitor all jobs on the platform.

URL: </admin/operations/job-postings>

Layout

- All active jobs
- Filter: by status, category, country, posted date
- Per job: title, role, client (display + real for admin), posted date, status, candidates expressed interest count, hires made

Job detail view

- Full job description
- Match score breakdown
- All candidates who expressed interest
- Talent Specialist intervention history
- Outcome (filled / closed / paused)

Admin actions

- Edit job posting (rare, with audit)
- Pause job
- Close job
- Investigate (flag for follow-up)
- Force shortlist (manually push specific candidates)

Designer deliverables

- Job postings list
- Job detail view
- Admin override flows
- Mobile responsive

Step 12 — Disputes page (admin level)

Purpose: Highest-level dispute oversight. Admin sees all disputes, can intervene anywhere.

URL: </admin/operations/disputes>

Layout

Header

- "All Disputes"
- Filter: open / in progress / resolved / escalated to admin / SLA at risk
- Sort: oldest, newest, by category, by dispute reason

Disputes list

Per row:

- Status, client, candidate, contract, dispute reason, owning Specialist, time elapsed, SLA countdown, escalation status

Dispute detail view

Same as Specialist's view, but with admin-level controls:

- All Specialist-level information
- Plus admin-level audit:
 - Who's investigated this dispute
 - What evidence has been reviewed
 - Specialist's decision (if made)
 - Reasons for any pending escalation

Admin actions

- Override Specialist decision (with reason and audit)
- Make admin-level decision

- Refund parties involved
- Suspend a party for severe behavior
- Investigate further (flag for trust & safety)
- Document case for legal/regulatory review

Patterns and analytics

- Disputes per Specialist (compared)
- Disputes per role category
- Disputes per client (clients with high dispute rates flagged)
- Average resolution time per Specialist
- Escalation rate
- Patterns admin should know about

Designer deliverables

- Admin disputes list
- Admin dispute detail view
- Admin intervention flows
- Override decision flow with full audit
- Pattern analytics
- Mobile responsive

Step 13 — Reviews moderation page

Purpose: Moderate reviews on candidate and client profiles.

URL: </admin/operations/reviews>

Layout

Header

- "Reviews Moderation"
- Filter: by review type (candidate-side / client-side), date, status (live / flagged / removed)
- Search

Reviews list

Per row:

- Reviewer (anonymized in public; admin sees real name)
- Reviewee
- Review content (truncated)
- Stars and rating
- Status (live / flagged for review / removed / appealed)
- Posted date
- Action: View detail, Approve, Remove, Investigate

Review detail view

- Full review content
- Reviewer and reviewee profiles
- Context (which contract this came from)
- Reports/flags filed against this review
- Patterns (does this reviewer leave many reviews? do they all sound similar? sock-puppet detection?)

Admin actions

- Approve (live)
- Remove (with reason — abuse, fraud, mistake)
- Add platform note (e.g., "This review was investigated and confirmed accurate")
- Suspend reviewer (if pattern of bad-faith reviews)
- Notify reviewee that review was removed

Designer deliverables

- Reviews moderation list
- Review detail view
- Pattern detection visualization
- Approval/removal flows with audit
- Mobile responsive

Step 14 — Reports & Analytics (admin)

Purpose: Atlas-level reporting and analytics.

URL: </admin/operations/reports>

Layout

Header

- "Reports & Analytics"
- Date range selector
- Custom report builder

Pre-built reports

Tabs for different report types:

Platform-wide:

- Total users (candidates, clients, specialists)
- New signups per day/week/month
- Approval rate over time
- Hire rate over time
- Average time-to-hire
- GMV per period
- Revenue per period

Trust & Safety:

- Disputes per period (resolved by Specialist, Manager, Admin)
- Suspended/banned accounts per period
- Suspicious activity flags per period
- Anti-fraud system effectiveness

Performance:

- Talent Specialist performance comparison
- Pool health by category
- Match success rates
- Daily activity audit summary

Financial:

- GMV per category

- Fee revenue per period
- Refunds per period
- Failed payments per period
- Subscriptions and renewals

Compliance:

- Data subject requests received per period
- Legal requests received per period
- Privacy policy update history
- Cookie consent rates

Custom report builder

- Drag-and-drop interface
- Select data sources
- Filter and group
- Choose visualization (table, chart, map)
- Save as template
- Schedule (daily, weekly, monthly auto-generation)
- Share with specific admins

Export

- CSV, PDF, Excel
- Email reports to specific recipients on schedule

Designer deliverables

- Reports & Analytics overview
- Pre-built report templates
- Custom report builder
- Export tools
- Schedule reports
- Mobile responsive

PART 4 — TRUST & SAFETY

Step 15 — Fraud & Abuse page

Purpose: Identify and investigate fraud and abuse on the platform.

URL: </admin/trust-safety/fraud-abuse>

Layout

Header

- "Fraud & Abuse"
- Filter: severity, date, account type
- Search

Fraud alerts list

Per alert:

- Severity badge (Critical / High / Medium / Low)
- Account affected (candidate, client, specialist)

- Type (multiple accounts, fake ID, identity mismatch, payment fraud, abuse pattern, suspicious activity)
- Detection date
- Status (Open / In Investigation / Resolved / Dismissed)
- Quick action: Investigate, Suspend account, Dismiss

Alert detail view

- Full evidence:
 - System signals that triggered the alert
 - Pattern analysis
 - Related accounts (if multiple-account fraud)
 - Behavioral anomalies
 - Documents involved
 - Timeline of events
- Admin notes from previous investigators
- Investigation progress tracker

Admin actions

- Investigate further
- Suspend account(s)
- Ban account(s)
- File legal report
- Refund affected parties
- Document for regulatory submission
- Dismiss as false positive

Designer deliverables

- Fraud & abuse list
- Alert detail view
- Investigation progress tracker
- Admin action flows
- Mobile responsive

Step 16 — Security Incidents page

Purpose: Track security incidents (breaches, attacks, suspicious activity).

URL: </admin/trust-safety/security-incidents>

Layout

Header

- "Security Incidents"
- Filter: severity, status, date
- "Report new incident" button

Incidents list

Per incident:

- ID, severity, type (data breach, login anomaly, unauthorized access, malware, phishing report)
- Status (New / In Investigation / Mitigated / Closed)
- Date detected
- Affected users count

Incident detail view

- Full incident description
- Timeline
- Actions taken
- Notification status (have affected users been notified?)
- Regulatory notification status (does this trigger GDPR/CCPA breach notification?)
- Post-mortem (if completed)

Admin actions

- Update incident status
- Notify affected users
- Notify regulators (if required)
- Coordinate with security team
- Document for compliance

Designer deliverables

- Security incidents list
- Incident detail view
- Notification flows
- Compliance integration
- Mobile responsive

Step 17 — Account Suspensions & Bans page

Purpose: Track all account restrictions.

URL: </admin/trust-safety/suspensions-bans>

Layout

- Table of all suspensions and bans
- Per row: account, status (suspended / banned), reason, date, admin who took action, expiration (if temp)

Detail view

- Full suspension/ban record
- Reason with audit trail
- Notifications sent to affected user
- Appeal status (if user appealed)

Admin actions

- Lift suspension early
- Convert suspension to ban
- Document for legal/compliance
- Communicate with affected party

Designer deliverables

- Suspensions & bans list
- Detail view
- Lift/convert flows
- Mobile responsive

Step 18 — Suspicious Activity page

Purpose: Real-time stream of unusual activity that may not yet be a confirmed alert.

URL: </admin/trust-safety/suspicious-activity>

Layout

- Real-time feed of activity flagged as unusual
- Per item: account, activity type, signal strength, time
- Click to investigate or dismiss

Detail view

- Full event details
- Patterns (is this part of larger pattern?)
- AI confidence score
- Related events

Admin actions

- Investigate
- Mark as legitimate
- Escalate to fraud alert
- Add to watchlist

Designer deliverables

- Suspicious activity feed
- Real-time updates
- Detail view
- Action flows

PART 5 — FINANCE

Step 19 — Transactions page

Purpose: All financial transactions on the platform.

URL: </admin/finance/transactions>

Layout

Header

- "All Transactions"
- Date range selector
- Filter: by type (payment, refund, fee, payout), status, currency, amount range
- Search by user

Transactions list

Per row:

- Date
- Type
- From (user/account)
- To (user/account or Atlas)
- Amount + currency
- Status (Completed / Pending / Failed / Refunded)

- Reference / contract / invoice ID

Transaction detail view

- Full transaction details
- Stripe / Wise / payment processor reference
- Related contract or invoice
- Audit trail
- If failed: error details and retry options

Admin actions

- Investigate transaction
- Refund (with reason)
- Mark as fraudulent
- Reverse failed transaction

Designer deliverables

- Transactions list with all filters
- Transaction detail view
- Refund initiation flow
- Mobile responsive

Step 20 — Fees & Pricing page

Purpose: Configure platform fees and pricing.

URL: </admin/finance/fees-pricing>

Layout

Current fee structure

- Client fee on hire: 10%
- Candidate fee on hire: 0%
- Re-certification fees:
 - English assessment: \$20
 - Interview 1: \$30
 - Interview 2 per category: \$50
- Currency conversion fees: pass-through (Wise rate)
- Payment processing fees: pass-through (Stripe rate)

Modify fee structure (Super Admin only)

- Change percentage fees
- Change re-certification prices
- Set promotional/founding-cohort discounts
- Audit log of all changes

Pricing tiers (if introduced later)

- Premium tier configuration
- Enterprise tier configuration
- Promotional codes

Designer deliverables

- Fees & Pricing overview

- Modify fees flow with audit and confirmation
- Promotional code management
- Mobile responsive

Step 21 — Refunds & Adjustments page

Purpose: Manage refunds and financial adjustments.

URL: </admin/finance/refunds>

Layout

Pending refunds (top)

- Refunds awaiting admin approval
- Per row: requester, amount, reason, contract, time pending
- Approve / Reject / Escalate

Recently issued refunds

- Per row: amount, recipient, reason, date, admin who approved
- Click for detail

Manual refund / adjustment

- Form to issue ad-hoc refund or adjustment
- Reason field (required)
- Amount and currency
- Recipient
- Confirmation flow with audit

Refund analytics

- Refunds per period
- Refunds per reason category
- Refund rate as % of GMV
- Refund patterns (which categories, clients have most refunds)

Designer deliverables

- Refunds dashboard
- Pending refunds list
- Manual refund flow
- Refund analytics
- Mobile responsive

Step 22 — Tax Documents page

Purpose: Manage tax forms (1099, W-8BEN, etc.) for candidates and clients.

URL: </admin/finance/tax-documents>

Layout

- Annual tax document generation
- Per candidate: required forms, status, deadline

- Bulk generate forms
- Filing status tracking
- Compliance with US/UK/EU tax requirements

Designer deliverables

- Tax documents list
- Per-candidate tax detail
- Bulk generate flow
- Filing tracker
- Mobile responsive (limited)

PART 6 — COMPLIANCE

Step 23 — Legal Requests page

Purpose: Handle subpoenas, court orders, regulatory requests.

URL: </admin/compliance/legal-requests>

Layout

Header

- "Legal Requests"
- Filter: status, deadline, jurisdiction
- "Submit new request received" button

Requests list

Per row:

- Date received
- Source (court, regulator, government agency)
- Type (subpoena, court order, regulatory inquiry, FOIA request)
- Subject (account or topic)
- Deadline
- Status (Acknowledged / Under Review / Responded / Closed)

Request detail view

- Full request document (uploaded)
- Subject
- Required action and deadline
- Internal notes from legal team
- Drafted response
- Action timeline

Admin actions

- Acknowledge receipt
- Assign to legal counsel
- Draft response
- Submit response
- Document for archival
- Notify affected user (where required)

Designer deliverables

- Legal requests list
- Request detail view
- Document upload
- Response drafting flow
- Mobile responsive

Step 24 — Data Subject Rights page

Purpose: Handle GDPR/CCPA/PIPEDA data subject access, correction, deletion, and portability requests.

URL: `/admin/compliance/data-subject-rights`

Layout

Header

- "Data Subject Rights Requests"
- Filter: type, status, deadline
- Statistics: requests per period

Requests list

Per row:

- Subject (user)
- Type (access / correction / deletion / portability / restriction / objection)
- Filed date
- Deadline (typically 30 days under GDPR/CCPA)
- Status

Request detail view

- User details
- Request type and specifics
- Identity verification status (admin must verify subject's identity before fulfilling)
- Internal status of processing
- Action timeline

Admin actions

- Verify subject identity
- Process request:
 - For access: generate full data export
 - For correction: update specific fields
 - For deletion: full account erasure (GDPR right to be forgotten)
 - For portability: export in machine-readable format
- Notify subject of completion
- Document for compliance audit

Designer deliverables

- Data subject rights list
- Request detail view
- Identity verification flow
- Data export tools
- Account deletion flow
- Mobile responsive (limited)

Step 25 — Audit Logs page

Purpose: Immutable audit trail of all admin and system actions.

URL: </admin/compliance/audit-logs>

Layout

Header

- "Audit Logs"
- Filter: by admin, by action type, by date, by affected user
- Search

Logs list

Per entry:

- Timestamp
- Admin / system actor
- Action type (login, suspend, refund, modify, delete, etc.)
- Subject (affected user/record)
- Before/after data
- IP address
- Device / user agent
- Result (success / failure)
- Reason (if provided)

Logs are **immutable** — admins cannot delete or modify them. Adding context notes is allowed.

Detail view

- Full audit entry
- Related actions
- Forensic context

Export

- Full audit logs exportable for compliance audits
- Encrypted backup capability

Designer deliverables

- Audit logs list with filters
- Log detail view
- Export tools
- Mobile responsive (limited)

Step 26 — Privacy Reports page

Purpose: Privacy-related reporting and metrics for compliance.

URL: </admin/compliance/privacy-reports>

Layout

- Cookie consent rates
- Data processing metrics

- Data retention compliance status
- Subprocessors list and last review date
- Privacy policy update history

Designer deliverables

- Privacy reports overview
- Per-report detail
- Mobile responsive (limited)

Step 27 — Regulatory Submissions page

Purpose: Track all regulatory submissions (GDPR data registers, CCPA notices, breach reports).

URL: </admin/compliance/regulatory-submissions>

Layout

- Submissions by jurisdiction
- Status of each
- Deadlines

Designer deliverables

- Regulatory submissions tracker
- Mobile responsive (limited)

PART 7 — PLATFORM CONFIGURATION

Step 28 — Platform Settings page

Purpose: Configure platform-wide settings (Super Admin only).

URL: </admin/platform/settings>

Layout

Categories of settings

Operational:

- Vetting requirements (min English level, retake cooldowns, etc.)
- Match score threshold (default 60%)
- Pool depletion thresholds
- SLA settings (review SLA, dispute SLA)
- Daily activity submission deadlines

Financial:

- Fee structure (link to Step 20)
- Currency settings
- Payment processor configuration

Communications:

- Email templates
- WhatsApp templates
- Notification settings

Branding:

- Logo upload
- Color scheme
- Email branding

Security:

- 2FA requirements
- Session timeout
- Password policy

Modify any setting:

- Confirmation modal with diff (before/after)
- Audit log entry created
- Affected users notified (where appropriate)

Designer deliverables

- Platform Settings overview with categorized sections
- Per-setting modify flow with audit
- Confirmation modals
- Mobile responsive (limited)

Step 29 — Categories & Skills page

Purpose: Manage role categories, skills, and tools.

URL: </admin/platform/categories-skills>

Layout

Role categories

- All 10 role families with their sub-categories
- Per category: number of candidates, demand metrics, owning Specialist
- Add new category (Super Admin)
- Modify category
- Archive category (with migration plan)

Skills library

- All skills tagged across the platform
- Skill consolidation (merge duplicates)
- Add new skill (Super Admin)
- Categorize skills by role family

Tools library

- All tools/software
- Common tools per category
- Add new tool

Designer deliverables

- Categories & Skills overview
- Per-category management
- Skill/tool consolidation tools
- Audit on modifications
- Mobile responsive (limited)

Step 30 — Integrations page

Purpose: Manage third-party integrations (Stripe, Wise, etc.).

URL: </admin/platform/integrations>

Layout

- All integrations: Stripe, Wise, video call provider, etc.
- Status of each (connected / disconnected / error)
- Configuration
- Test integration
- Logs and errors

Designer deliverables

- Integrations list
- Per-integration detail
- Configuration flow
- Mobile responsive (limited)

Step 31 — Email & SMS Templates page

Purpose: Manage all transactional email and SMS templates.

URL: </admin/platform/templates>

Layout

- All email templates (welcome, verification, contracts, payments, disputes, etc.)
- All SMS templates
- Per template: name, used in (which flow), last modified, preview
- Modify template
- Test send to specific email/phone
- Approval flow (changes require admin sign-off)

Designer deliverables

- Templates list
- Template editor
- Preview and test send
- Approval flow
- Mobile responsive (limited)

Step 32 — Help Center Content page

Purpose: Manage Help Center articles and content.

URL: </admin/platform/help-content>

Layout

- All Help Center articles by category
- Per article: title, category, last modified, views, helpfulness rating
- Modify article
- Add new article
- Categorize and tag

Designer deliverables

- Help Center content management
- Article editor
- Mobile responsive (limited)

PART 8 — INTERNAL OPERATIONS

Step 33 — Performance Dashboards (admin-level)

Purpose: Aggregated performance dashboards across all teams.

URL: </admin/internal/performance>

Layout

- Team performance: Manager + 11 Specialists
- Cross-team metrics
- Manager-level metrics (Manager's own performance)
- Specialist comparison (anonymous to other specialists; admin sees all)

Designer deliverables

- Performance dashboards
- Comparative analytics
- Mobile responsive (limited)

Step 34 — Incident Reports page

Purpose: Internal incident reporting and post-mortem.

URL: </admin/internal/incidents>

Layout

- Open incidents
- Resolved incidents
- Incident reports per incident
- Post-mortem documents

Designer deliverables

- Incidents list
- Incident detail
- Post-mortem editor

- Mobile responsive (limited)

Step 35 — Internal Communications page

Purpose: Manager and admin communications.

URL: </admin/internal/communications>

Layout

- Internal messaging between admins
- Announcements to entire team
- Weekly/monthly memos

Designer deliverables

- Internal messaging
- Announcements
- Mobile responsive

Step 36 — Knowledge Base page

Purpose: Internal admin documentation.

URL: </admin/internal/knowledge-base>

Layout

- Documentation for admin processes
- Standard operating procedures
- Compliance checklists
- Onboarding for new admins

Designer deliverables

- Knowledge base interface
- Documentation editor
- Search

CROSS-CUTTING ELEMENTS

Step 37 — Notifications center (admin-specific)

Purpose: Admin notifications, separate from Specialist/Manager.

URL: Triggered from bell icon in admin nav.

Notification types

- Platform-wide alerts (down time, errors)
- Critical fraud / abuse alerts
- Legal request received

- Data subject request received
- Pending refunds requiring approval
- Audit log alerts (suspicious admin activity)
- Performance flag (Specialist or Manager)
- Pool crisis alerts
- Subscription / payment failures

Designer deliverables

- Admin notifications dropdown
- Full notifications page
- Real-time updates
- Mobile responsive

Step 38 — Global admin search

Purpose: Powerful search across all admin data.

URL: Search bar in top nav.

Searches across

- All users (candidates, clients, specialists, manager, admins)
- Transactions
- Disputes
- Audit logs
- Job postings
- Engagements
- Help Center content
- Internal documentation

Designer deliverables

- Global search component
- Categorized results
- Quick navigation to detail pages

Step 39 — Onboarding for new admins

When a new admin is created:

- Onboarding tour walks them through:
 1. Their role and permissions
 2. The dashboard
 3. User management
 4. Operations
 5. Trust & safety
 6. Finance
 7. Compliance
 8. Platform configuration
 9. Internal operations
 10. Audit logs and accountability

Designer deliverables

- Onboarding tour for admins

- Skip option, progress indicator

Step 40 — Real-time updates

Critical surfaces auto-update:

- Dashboard
- Disputes (new ones appearing)
- Trust & safety alerts
- Transactions
- Notifications

Designer deliverables

- Toast notifications
- Real-time animations
- WebSocket-driven updates

DELIVERABLES SUMMARY

Pages (40 main pages + cross-cutting)

Entry & Dashboard:

1. Sign In
2. Admin Dashboard
3. Admin Profile & Permissions

Users: 4. Users overview 5. Individual Candidate detail 6. Individual Client detail 7. Individual Talent Specialist detail 8. Individual Manager detail 9. Other Admins management

Operations: 10. Active Engagements 11. Job Postings 12. Disputes (admin level) 13. Reviews moderation 14. Reports & Analytics

Trust & Safety: 15. Fraud & Abuse 16. Security Incidents 17. Account Suspensions & Bans 18. Suspicious Activity

Finance: 19. Transactions 20. Fees & Pricing 21. Refunds & Adjustments 22. Tax Documents

Compliance: 23. Legal Requests 24. Data Subject Rights 25. Audit Logs 26. Privacy Reports 27. Regulatory Submissions

Platform: 28. Platform Settings 29. Categories & Skills 30. Integrations 31. Email & SMS Templates 32. Help Center Content

Internal: 33. Performance Dashboards 34. Incident Reports 35. Internal Communications 36. Knowledge Base

Cross-cutting: 37. Notifications center 38. Global admin search 39. Onboarding for new admins 40. Real-time updates

Components needed

Admin-specific:

- Critical alerts panel with priority levels
- Platform health panel
- Permissions matrix
- Audit log component (with timestamp, actor, action, before/after)
- User detail page template (used for candidates, clients, specialists, manager)
- Dispute resolution detail with admin overrides
- Refund initiation flow with audit
- Suspension/ban flow with reason and notification
- Data export tools
- Identity verification override
- Manual refund/adjustment form
- Fraud alert detail with evidence
- Security incident tracker
- Transaction detail
- Tax document generator
- Legal request handler
- Data subject rights handler with identity verification
- Platform settings configuration with audit
- Email/SMS template editor with preview and approval
- Categories & skills management
- Integration configuration
- Performance comparison charts
- Custom report builder
- Real-time notification dropdown
- Global admin search

Reused from other interfaces:

- Standard dashboard layouts
- Filter and sort components
- Forms and inputs
- Modal and confirmation patterns
- Empty states

Design tokens

- Same as Talent Specialist scope (consistency)
- Plus admin-specific:
 - Higher visual weight on destructive actions
 - Distinct color for super-admin-only actions
 - Audit indicators (always-visible "logged" badge near action buttons)

Accessibility

- WCAG 2.1 AA across all pages
- High contrast (admins work all day)
- Keyboard navigation throughout
- Screen reader support for tables and forms
- Focus management for modal flows
- Color-blind safe color palette

Performance

- All pages load in under 2 seconds
- Long tables virtualized (transactions, audit logs, users)
- Lazy load detail pages
- Real-time updates via WebSocket
- Heavy reports cached and refreshed periodically

Final deliverables

- Figma file with all 40 pages and cross-cutting elements (desktop primarily)
- Complete admin component library
- Interaction prototypes for key flows: user investigation, suspension, refund, dispute intervention, fraud handling, audit log review, platform settings modification, legal request handling
- Design tokens
- Accessibility annotations
- Real-time update specifications
- Audit log specifications
- Permission matrix specifications
- Loom walkthrough explaining major design decisions
